

# The Earth Science Angle: Study eclipses as a volunteer observer with GLOBE

The Earth is solar-powered. The temporary blocking of the Sun's light during an eclipse has an impact on the atmosphere that we can observe with our senses and simple instruments.

During an eclipse, you as a volunteer scientist are able to:

- Observe how the eclipse changes atmospheric conditions near you

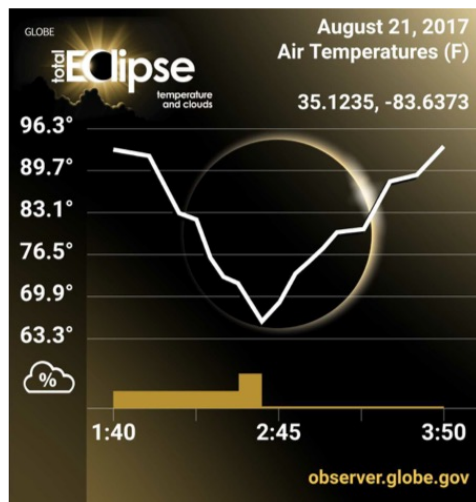

- Contribute to a citizen science database used by scientists and [students](#) to study the effects of eclipses on the atmosphere

- Rahman, I. u., Czajkowski, K., Jiang, Y., & Weaver, K., (2019). Validation of GLOBE Citizen Science Air Temperature Observations Using Data from the Great American Solar Eclipse. In S.R. Buxner, L. Shore, & J.B. Jensen (Eds.), [Celebrating the 2017 Great American Eclipse: Lessons Learned from the Path of Totality](#) (pp. 501-509). San Francisco: Astronomical Society of the Pacific Conference Series.

- Provide comparison data even if you are not in the path of maximum eclipse

# How can you help collect data?

- GLOBE Eclipse uses the platform of the [GLOBE Observer app](#), part of the long-standing [Global Learning and Observations to Benefit the Environment \(GLOBE\) Program](#). The tool is not visible in the app on a regular basis but is only opened up when a solar eclipse is happening somewhere in the world.
- The Eclipse tool will prompt you to take air temperature measurements using a meteorological thermometer, as well as taking regular observations of sky conditions using the [Clouds tool](#).
- For the eclipses in 2023 and 2024, we are also looking to add observations of wind speed and direction. Visit the [GLOBE Observer Eclipse](#) page for more details about equipment needed, how to take observations, and answers to frequently asked questions.

# Who can participate?

Anyone in a [GLOBE country](#) is able to collect data using the GLOBE Observer app. We encourage participation by:

- Interested individuals
- Families
- Schools
- [Informal educators hosting programs](#) at libraries, museums, nature centers, etc.
